- ★ **9 open stations for product loading or customer furnished automation standard. Machine designs with additional stations available**
- ★ **Heavy-duty industrial design and construction for trouble-free service & long life**

Description

Starview's BSC Series carousel type blister sealers are designed for high volume production requirements. Fourteen (14) station machines are standard; however, units can be manufactured with anywhere from twelve (12) to twenty (20) or more stations. The BSC machines may be used for conventional carded blisters, full face blisters and half-clamshell styles including applications using Tyvek, foils and other heat sealable lidstock. The standard BSC machines feature one heated sealing station, one finished package unload station, one bottom blister feed station, with the remaining stations used for operator product loading stations and customer furnished automation.

Starview's BSC Series carousel type blister sealing machines can be designed to include optional features such as additional automatic feeders. Additional PLC I/O's may be added for interface with customer supplied systems.

Starview's BSC Series carousel machines are offered with Hot and Cold presses for Plastic-to-Plastic clamshell sealing as well as conventional blister sealing. Please feel free to request a custom quotation on a machine designed for clamshell and blister sealing.
