## Description

**Starview's PHS Series** semi-automatic rotary type Clamshell and Blister sealers are designed for medium to higher volume production requirements. These machines may be used for Plastic-to-Plastic Clamshell sealing as well as conventional carded blisters, full face blisters and half-clamshell styles including applications using Tyvek, foils and other heat sealable lidstock. The PHS Series units are available in three (3), six (6) and eight (8) station designs. The standard machines feature one heated sealing station & one cooled station

**Starview's PHS Series** rotary heat sealers are designed to include an optional automatic card feeding system and automatic package discharge system on most models. These may be self-standing or permanently attached depending on the model. An optional chiller installed in the machine eliminates the need for routing in-plant chilled water to the machine. Casters and a lightweight package hold down system are also offered for greater versatility.
